Introduction

In contemporary Okinawa, there are four distinct types of village settlement. The first and the most common is the village cluster. Houses are grouped in a central area, usually along or on both sides of a road, surrounded by farm lands and rice fields. The second, the shoe-string type, is less common. Here houses are lined along either side of a main street. The third is a here-and-there type of settlement. This has been called a yadori (Japanese) or yadui (Okinawan) village, translated as plantation, but this is too exalted a word.[1] These villages may have sub-settlements. Houses are scattered among intervening plots of cultivated land. In the fourth category are the modern improvisations: land formerly in forest, grass or shrub which has been reclaimed and used for houses and nearby cultivation, or former agricultural land now taken up for house sites, a result of increased population or of war time destruction of other parts of a village.

The basic type of Okinawan village is the cluster, a village small in area whose houses, close together, and on irregular winding lanes, are separated from one another by stone or rock walls, or by boundaries of trees or shrubs. The front part of the house compound usually is cut off from the road by a stone fence, running part way across, with the opening to the road obstructed by a stationary barrier, sometimes of stones, often of woven grasses.

In the village of a bygone age, there were large open spaces like a common on the outskirts "often appearing as glades in the forest." In this area, rice was laid out to dry, horse racing and other sports took place, the village council met, goods were bartered, justice administered, and festivals celebrated.[2] When approached from a distance, the older villages seemed literally buried in foliage. In the last century the larger villages still had rest huts (cung-qua) for travellers, usually government officials to use from one overnight stop to another. The older village also had a series of small buildings on stilts three to six feet long. These were granaries and food storehouses. Some houses were also on stilts. Older accounts have stressed the concealment of the Okinawan village, its houses separated from one another, its lanes lined or embowered with bamboo, with banana trees, or with arbors. To

The village is one of a series of settlements in a long narrow valley, on a limestone plain, bordered on the east by a steep ridge, up to 300 feet in elevation and running in a northwest and southeast direction, which divides the valley from the sea. On these cliff like formations, large outcrops are covered with shrubs and miscanthus grass. Lanes and roads lead from the valley floor to the summits of these hills, where villagers collect their firewood and grass for roof thatch. On the rocky, steep slopes of this seaward ridge, above the line of cultivation, is the tomb area. Precipitous and stony hills prevent cultivation, but occasionally a sharp tongue of land reaches far up the slope, its end protected from the rains and wash by a short stone fence.

Between Gushichan and Hanashiro village, there is a bridge over a small stream, its upstream course obscured by its dispersion in the rice fields. The dirt road, gradually ascending, cuts through the main rice growing area of the village, on a gentle slope, reflected in the bench cultivation of the rice fields. Here and there are large rocks and stony outcrops, with an occasional scrub pine, cycad, or a covering of miscanthus. Cultivation goes around these large stones.

The road, about one-fourth of a mile from the bridge, soon leads into what looks like, from a distance, a densely wooded area. This is the settlement.

With the exception of the rough stony land of the limestone mountains and steep slopes, the soils of the area are the Okinawa clay loams and the Chinen stony clays lying on the limestone plains. The farm and village area takes up approximately 427 acres, of which 257 are in gently sloping Okinawa clay loams, a deep, well drained, neutral to slightly acid and very fertile soil. Another five acres is of the same type but these are in slopes, of a gradient ranging from 8-15%. There are 80 acres in gently sloping Shuri clays, shallow, moderately fertile, an olive colored, crumbly, calcareous clay; another 35 acres in the Awase clays, deep fertile, crumbly, calcareous clay of olive-gray color, and 14 acres of rough stony land.

The hillsides and the summits are free of densely growing trees and shrubs, and the lowlands are given over to cultivation. There are no groves of trees to protect the crops from typhoons. The trees and the protection they give are confined to the village. This is typical of many villages of southern Okinawa, where the hills and mountains have few trees, and dense growths are associated with habitation.

Inside the village, winding lanes branch off the main dirt road. The older houses are on the north side of the road. On the opposite side, the houses, newer or rebuilt since the war, adjoin the cultivated area. In the older section, the dense shrubbery, the tree lined lanes, broken occasionally by stone fences, wind through the village with footpaths branching off, sometimes past an open field, a reminder of a failure to rebuild after the war. On the northern outskirts is the village office, its gong in the yard, the open field, a playground for the children.

361
351 The village is a group of houses, each with its own compound, and these give it an inclosed look. There are few if any gardens or vegetable patches either in the compounds or within the village settlement.

363 The lanes resemble quiet winding country roads. The rock fences, or the lines of trees or shrubbery often conceal the houses. There is an appearance of loneliness in these lanes and roads, except at busy times of the day when the children return from school. The lack of commercial activity, except for the women carrying rice on their heads to the mill [487] and for the small village stores, contributes to this impression of quiet [462] which one would expect from the routine of agriculture. At night, when [354] the doors are drawn, and when the flickering and smoky oil lamps are lit, the loneliness and quiet of the village is even more pronounced. The [493] lanes and the roads are deserted, save for an occasional passing truck, [491] bicycle, or three wheeled cycle, and in one of the favorite words of all Okinawans, the place is sabishii.[6]

366 Since there is little activity in the village other than farming,
368 neighboring villages and distant towns supply the additional needs. At nearby Gushichan village, there are the primary and junior high schools, the post office, the township and agricultural association offices, a barbershop, and some small stores. At Minatogawa, about one and one half miles away, there is a public bath, and across the river from this village, in Horikawa, an occasional play from the Okinawan stage, or a movie. Buses run through the village twice a day and one can make connections to Naha or Itoman, the two most likely places for buying [494] or selling. Or one can take the three wheeled cycles which pass through more frequently.

927 Physically, the village was much affected by the war. On June 11,
362 1945, the front line ran through the cultivated area between Hanashiro and Gushichan villages. Hill 95, the scene of fierce fighting was in the vicinity of Hanashiro.[7] One can still see an occasional tank track, abandoned helmets and scattered fragments of war materials in the fields. The village was affected by the war in ways which are now observable indirectly in the makeshift houses, improvised shacks, the roofs of half [355] tile and half thatch, the odd additions to the older buildings partly destroyed, and the lack of drain pipes and water catchment tanks. Houses, which to superficial appearance, have existed for generations, have been rebuilt since the war with grass substituting for the tile roofs. [311] War operations over the cultivated areas also resulted in some loss of land. A long mound in the rice areas, with paths along its ridge, was formerly a road built by the Americans in the final drive toward Mabuni. Almost all the houses in the village were destroyed.

6 This Japanese word suggests both loneliness and melancholy.

Since the war, the old narrow one lane roads have been broadened, permitting heavier auto traffic. Land ownership has been undisturbed, for it is not in an area in which the military has required land. Since the war, the villagers have tried to return to their former way of life, but this has been done with poorer houses and fewer possessions.

3

Minatogawa

Minatogawa, the second village studied, formerly was a shoe string type of settlement. Houses, shops, drinking places were along the seawall road. This pattern is now altered as a result of the war. Scattered areas have been relocated and houses built on lands formerly used for sweet potatoes. It is now an indeterminate type of village, retaining some indications of its old settlement pattern along the main road, with additions of clusters of houses in the newly settled areas.

Like Hanashiro, this village is in Gushichan township, and located on Highway 64. It is directly on the main historical road, previously mentioned, which led from Naha to the Chinen peninsula. The road, along which its houses are built, parallels for a distance the estuary of the small Minatogawa river. This narrow estuary, called Usaregawa, which connects the river mouth with the Pacific Ocean, and the small river itself (Yuhigawa) is a boundary between Gushichan and Tamagusuku townships. On either side there are steep cliffs, the sites of the best known stone quarries of Okinawa.

The settlement and the adjoining lands have an area of about 256 acres. It is a mixed economy village with three distinct occupational groups: fishermen, stonecutters, and farmers. There is a second village whose borders bland with those of Minatogawa. These two villages are now known officially as Minatogawa-ichiku and Minatogawa-niku. The two terms can be awkwardly translated as Minatogawa first ward, and Minatogawa second ward. But popularly they retain their older names: Minatogawa for the fishing village, and Nagamo for the agricultural second ward. These two separate but adjoining villages were until 1925 a single village.

The division was the result of distinct differences in outlook and occupation between the two sections. Minatogawa is a fishing village and has strong ties with Itoman, a town on the East China Sea shore about 4 1/2 miles away. Nagamo is an agricultural community originally settled from Naha and Shuri. Stone-cutting operations spread over both areas. While the fishing village of Minatogawa was given the emphasis in this study, it will be necessary occasionally to include Nagamo in the discussion.[8]

8 The writer did not realize until he lived here that two villages were involved, thinking that the two wards referred to a single administrative unit. By this time the work on Hanashiro had been well started, and time did not permit the intensive study of Nagamo.

Treeless Minatogawa. This is the business district of the village. The buildings are small village shops. The building in the upper left is the village inn. The road winding toward the right is Highway 64 leading to Gushichan. Minatogawa stone is visible on the back of the store on the right of the picture. The low stone hedges in the foreground are typical of Minatogawa.

One feature typical of these villages is the boundary path (sabi), sometimes only a foot wide. The path is a boundary and a means of access. Roads and lanes are in the main areas of the village. They do not checkerboard a whole area. Too much land would be sacrificed. The farmer leaves his home, walks along the road or lane, and then takes a winding boundary path to his own field. In the aggregate, considerable land is taken up by boundary paths. Often the sides of the plot along the path are cut perpendicularly to take as full advantage of the soil as possible. There is little slope from the path to the field, and the paths of the rice paddy often look like miniature levees.

311 423

In his Narrative of a Voyage of the Ship Morison, which appeared in The Chinese Repository for 1838, S. Wells Williams wrote concerning Okinawa: "Indeed the Lilliputian minuteness with which the country is subdivided is singular." The tables and the land use maps which follow document this observation. The tables, which show the number of plots and their average size, for each village, were computed from land registers in the two township offices. The three main classifications, rice, dry crop, and wild land, have been selected. To appreciate the size of these plots, one should bear in mind that a 40' x 80' lot has over 88 tsubo and that an acre contains about 1210 tsubo.

[217]

[217]

The maps represent a tiny portion of those cadastral maps collected from the township offices and of which tracings were made. They also illustrate the complete and painstaking subdivision of a village area and the general uses to which each parcel is put.

Rice Land (Ta)

Taira

the community is dispersed. In the outlying parts, as far as 2 miles from the center (see map 1), the houses are scattered between the paddies or farm lands in sections which form subvillages or wards. As mentioned above, settlers from the south took up residence in these areas. Recently families from the main village have also moved to the more remote parts of the community, such as Udenaha, because they can reach their fields more conveniently. Although the name Taira refers to the political unit of main village and outlying parts, including Udenaha and Izena, most references in this study pertain only to the central community. Its 60 households, with about 330 individuals, form the primary social unit from which the sample of 24 children was chosen.

Central Taira nestles along the inner shore of Taira Bay, which opens into the Pacific Ocean. At this point the median range mountains recede from the coastline. Behind the village, rice paddies spread in a crazed pattern at the bottom and on the terraced sides of several valleys which are separated from each other by sparsely wooded hills. Here and there the red earth of an eroded section shows like a scab through the green slopes.

In traveling by road from the south, most people choose the highway along the East China Sea coast, which is connected with the road which crosses the island. Higashi township is entered through a low saddle in the mountains which separate the two coastlines. To the right and left begins Taira's forest. Central Taira is reached through a winding lane bordered by pine trees. To the left the view opens into one of the neatly cultivated rice fields, backed by the hills on whose flat tops and terraced sides village people cultivate their farm lands.

The central village itself lies on a sand bluff, separating the valley from the ocean, so that there is a slight drop toward both sides (see map 2). The main road runs the length of the village. Except for the thoroughfare, which is dirt and gravel, the side roads are not surfaced, and after heavy rains puddles form and remain for more than a day, to the delight of children who play in them.

When Taira was destroyed during World War II, along with its houses went much of the foliage which once served as a windbreak. A few fukugi trees * line the main street, and hibiscus hedges here and there hide some of the houses from a first inspection. There are bushes around the edges of the village.

The war-time destruction is hardly apparent on a first walk through the village. Along the main street, lined by houses, one finds the rice mill, a substantial new building of concrete and wood, the police sta-

* A small- to medium-sized evergreen tree with a narrow, upright, very dark green crown of leaves.
